Question | Community source | Design a production RAG system

Design a production RAG system for a company knowledge base. Walk through the architecture, and say where you would look if the answers were wrong.

▶ Where this comes from

WHAT YOU SAID

Landed Walk through the architecture of the RAG system

Nothing on-target yet for this part.

Landed Say where you would look if the answers were wrong

Nothing on-target yet for this part.

The rest did not answer the question.

VERDICT

You answered every part of the question.

SAY THIS NEXT

Retrieval is evaluated separately from generation because a single end-to-end score hides which half failed

Full analysis

Two Nemotron models, same prompt, rated independently. Every claim below is checked against your words.

Verdict | Nano vs Ultra | Point by point | Key ideas | Skills | How it ran

FINAL VERDICT

Developing (split decision) Models split

Ultra says solid (64), Nano says developing (45). When they split, the stricter reading stands, so you are not credited for something only one model saw.

Nano
nvidia/NVIDIA-Nemotron-3-Nano-30B-A3B

45
Developing

Answered the question 100

2 of 2 parts addressed

Quality of what you said 17

Ultra
nvidia/Nemotron-3-Ultra-550b-a55b

64
Solid

Answered the question 100

2 of 2 parts addressed

Quality of what you said n/a

9 points rated

Key ideas covered 0

0 of 6 key points supported

Skill level 0

average level 1.0 of 4 across 2 skills

Justified 0 Correct 0 Vague 9 Wrong 0

Nano reads this as developing: 2 of 2 question parts addressed, 0 points credited against 9 vague or wrong, and 0 of 6 key ideas landed.

Best point, in Nano's view

> *"We will start with the best of injection means ingesting the documents"*

Mentions retrieval but not evaluation separation.

Weakest point

> *"Retrieve each question answer accordingly"*

Mentions multiple questions but not retrieval evaluation.

What Nano says is most missing

Chunk boundaries follow the document structure so one fact is not split into pieces that never retrieve together

You said you split documents into chunks but did not explain how the splits match the document structure. This is why retrieval may break facts across chunks.

0 points rated

Key ideas covered 0

0 of 6 key points supported

Skill level 33

average level 2.0 of 4 across 2 skills

Ultra reads this as solid: 2 of 2 question parts addressed, 0 points credited against 0 vague or wrong, and 0 of 6 key ideas landed.

What Ultra says is most missing

Retrieval is evaluated separately from generation because a single end-to-end score hides which half failed

You say you will trace the answer path and check documents, but you do not describe a method to separate retrieval failures from generation failures, which is essential for debugging RAG systems.

HOW THE SCORE IS BUILT

40% **Answered the question.** Question parts the model marked addressed, each backed by a quote from you.

30% **Quality of what you said.** Each point: wrong 0, vague 1/3, correct 2/3, justified 1; halved when only related, zero when off-topic.

15% **Key ideas covered.** Key points supported by at least one of your correct or justified points.

15% **Skill level.** Mean of the skill levels, 1 to 4, scaled so level 1 is 0 and level 4 is 100.

Bands: 80+ strong, 60–79 solid, 40–59 developing, below 40 not yet. A parameter that does not apply to this question is left out and the weights rescale.
